

Hi All this is ASU here/ 

Hack windows PC using image file .. 

REQUIREMENTS :-

WINDOWS MACHINE

- We need a **payload**, **image**, **winrar** and **icon** of that image.
- For payload creation I'm using **Njrat** you can also use **Metasploit payload** that we generated earlier.
- For icon creation of image I'm using **Quick_any2ico** software you can use online tools to like **convertio.co**
- For binding payload with image file we use **Winrar** software.
- We first create the **SFX** archive of **image and payload file** and add **that image icon** to that archive & change the encoding scheme of file name for manipulation of file extension.
